

Dear Hiring Team at Benchling,

I am excited to apply for the Scientific Solution Consultant role at Benchling. With a strong academic foundation in molecular biology from ETH Zurich and hands-on experience in diverse research projects—including Cryo-Electron Tomography, plasmid design, and protein analysis—I am eager to bring my expertise to help life sciences organizations unlock their potential through your innovative platform.

During my master's and bachelor's studies, I actively contributed to cross-disciplinary projects, such as the iGEM competition, where I worked on metabolic flux manipulation using synthetic biology. These experiences honed my ability to analyze complex systems, collaborate across teams, and develop solutions that address critical scientific challenges. Complementing my wet-lab skills, I have cultivated a deep proficiency in computational tools such as ChimeraX, Python, and cryo-EM data reconstruction, equipping me to bridge the gap between experimental science and technology-driven solutions.

What excites me most about this role is the opportunity to combine my scientific background with Benchling's mission to revolutionize biotech research. I am confident that my technical expertise, communication skills, and drive to deliver impactful solutions align with the demands of this role. I look forward to the chance to contribute to Benchling's vision and support the advancement of cutting-edge research.

Thank you for considering my application.

Sincerely,
Tamino Cairoli
